

## ESPAÑOL

### INFORMACIÓN GENERAL

El Grupo C.A.M.P. da respuesta a todas las necesidades de los trabajadores en altura con artículos ligeros e innovadores que son diseñados, testados y fabricados dentro de un sistema de calidad certificado, con el fin de ofrecer un producto fiable y seguro. Las presentes instrucciones están destinadas a informar sobre la correcta utilización del producto durante toda su vida. **Lea, entienda y conserve estas instrucciones.** En caso de pérdida, puede descargárlas en el sitio web [www.camp.it](http://www.camp.it). El distribuidor debe proporcionar el manual de información en la lengua del país de uso del producto.

### UTILIZACIÓN

Este equipo debe ser utilizado únicamente por personas formadas y competentes o bajo la supervisión directa de personal con la formación y competencias adecuadas. Estas instrucciones no enseñan técnicas para trabajar en altura ni para cualquier otra actividad asociada, por lo que es necesario haber recibido una formación adecuada antes de utilizar este equipo. La escalada y cualquier otra actividad en la que estos productos puedan ser utilizados son intrínsecamente peligrosos. No escoger el equipo adecuado, usarlo incorrectamente o no realizar el mantenimiento debidamente podría producir daños, lesiones o incluso la muerte. El usuario debe ser capaz de velar por su seguridad y proceder correctamente en situaciones de emergencia. Para usar los equipos anticaídas de forma segura, es esencial que el dispositivo o el punto de anclaje estén posicionados correctamente y que el trabajo se realice de forma que minimice tanto el riesgo de caída como la altura de la propia caída. Antes de cada utilización, compruebe que la distancia de seguridad con respecto al lugar de trabajo es correcta, para que, en caso de accidente, no llegue a colisionar con el suelo o con otros obstáculos que pudieran encontrarse en la trayectoria de caída. El arnés integral es el único dispositivo de suspensión que se debe emplear en sistemas anticaída. Este producto debe usarse como se indica en las instrucciones y no se debe modificar en ninguna circunstancia. Puede utilizarse conjuntamente con cualquier otro producto de acuerdo con las especificaciones y las normas EN, considerando las limitaciones particulares de cada producto. En esta nota se indican únicamente algunos de los usos no permitidos o indebidos. Existen muchos más, pero es imposible citarlos todos o incluso llegar a imaginártolos. Se recomienda que este producto se destine al uso personal de un individuo.

### MANTENIMIENTO

**Limpieza de las partes textiles y de plástico:** aclárelas con agua limpia (<30°C) y jabón neutro, no aplique calor directo. **Limpieza de las partes metálicas:** aclárelas con agua limpia y sequélas. **Temperatura:** mantenga este producto siempre a una temperatura inferior a 80°C, de lo contrario, podría alterar su funcionamiento. **Sustancias químicas:** no use este producto si ha estado en contacto con alguna sustancia química, disolvente o carburante que puedan alterar sus características.

### ALMACENAMIENTO

Conserve el producto desembalado en un lugar fresco, seco, oscuro y lejos de cualquier fuente de calor, nivel de humedad elevado u otros agentes corrosivos que puedan dañarlo.

### RESPONSABILIDAD

La firma C.A.M.P. spa, o el distribuidor, no aceptará ninguna responsabilidad ante daños, lesiones o muertes ocasionados por el mal uso o modificación de cualquier producto de la marca CAMP Safety. Es responsabilidad del usuario en todo momento asegurarse de que entiende la correcta y segura utilización de cualquier producto de C.A.M.P. spa de lo que utiliza solo para la actividad para la que ha sido diseñado y de que aplica todas las medidas de seguridad. Antes de su utilización, debe asegurarse de que conoce el procedimiento para un rescate seguro y eficiente. Usted asume personalmente la responsabilidad de sus acciones y los riesgos que pueda correr. Si no es capaz de cumplir esta normativa, no utilice este equipamiento.

### 3 AÑOS DE GARANTÍA

Este producto tiene una garantía de tres años, que comienza a contar a partir de la fecha de adquisición, contra defectos de materiales o de fabricación. Esta garantía no cubre: desgaste, modificaciones o alteraciones, incorrecta conservación, corrosión, uso inadecuado y usos para los cuales no haya sido diseñado.

### INFORMACIONES ESPECÍFICA

#### INSTRUCCIONES DE USO

##### Swivel

C.A.M.P. Swivel es un dispositivo diseñado para conectar dos elementos evitando el rizado de la cuerda.

Para conectar un Swivel con una cinta o con un anclaje es necesaria la utilización de conectores certificados bajo la norma EN362 para trabajos en altura o EN12275 para montañismo (Fig.1). Durante la instalación, Swivel debe mantenerse correctamente tensado para evitar una posición de trabajo incorrecta de los mosquetones. Una carga sobre el eje estrecho puede provocar la rotura del conector (Fig.2). Si Swivel es utilizado en situaciones en las que puede no estar tensado, deben utilizarse conexiones rápidas (EN 362 Clase Q para trabajos en altura o EN 12275 Clase Q para montañismo).

Swivel debe trabajar siempre alineado con los conectores evitando que descansen o golpeen sobre las aristas o esquinas que puedan disminuir su resistencia (Fig.3).

Los anclajes estructurales utilizados deben responder a la norma EN 795 y deben ofrecer una resistencia mínima de 15 kN.

##### Multianchor

C.A.M.P. Multianchor (5, 8 y 12 agujeros) son dispositivos diseñados para ofrecer más puntos de fijación a partir de un único punto de anclaje.

Para conectar un Multianchor a un punto de anclaje es necesaria la utilización de conectores certificados bajo la norma EN 362 para trabajos en altura o EN 12275 para su utilización en

### montañismo (Fig.4)

Evite en todo momento que Multianchor descance o golpee sobre aristas o esquinas que puedan disminuir su resistencia (fig.5).

### REVISIÓN

Además de la inspección normal requerida antes, durante y después de cada uso, este producto debe ser examinado por una persona con competencia para ello con una frecuencia de 12 meses, a partir de la fecha del primer uso del producto. En la ficha de la vida útil del producto, se debe indicar dicha fecha y la de los sucesivos controles efectuados: conservar la documentación para controlar y para consultar durante toda la vida útil del producto. Asegúrese siempre de que las marcas del producto siguen siendo legibles.

### 3 AÑOS DE GARANTÍA

Op dit product rust een garantieperiode van 3 jaar vanaf de aanschafdatum, op fouten in materiaal of fabricage. Uitgezonderd van garantie zijn: gebruikelijke slijtage, wijzigingen of aanpassingen, onjuiste opslag, corrosie, schade door ongevalen of natigheid, gebruik waarvoor dit product niet is ontworpen.

### SPECIFIEKE INFORMATIE

#### INSTRUCTIES VOOR GEBRUIK

##### Draakoppling

De draakoppling van C.A.M.P. is ontworpen om twee delen van een systeem aan elkaar te bevestigen en om te voorkomen dat twee touwen in elkaar draaien. In systemen waar een draakoppling wordt gebruikt moet de koppelingen welke gebruikt worden voldoen aan de EN 362 voor werken op hoogte of met koppelingen welke voldoen aan de EN 12275 voor de bergsport (fig.1). Gedurende het gebruik moet de draakoppling op spanning blijven om een verkeerde positie van de koppelingen te voorkomen (zijnwaarde krachten op de opening van de koppeling kunnen er voor zorgen dat deze breekt - zie fig. 2). Indien de draakoppling wordt gebruikt in een systeem waarbij het niet onder spanning kan worden gebracht, dan moeten de koppelingen worden gebruikt (EN 362 Klasse Q snelkoppelingen voor werken op hoogte of EN 12275 Klasse Q snelkoppelingen voor de bergsport). De draakoppling moet altijd gebruikt worden in verticale richting en met gecertificeerde koppelingen in een systeemconfiguratie dat voorkomt dat de draakoppling scherpe randen raakt, die de sterkte van de draakoppling kunnen beïnvloeden (fig. 3). Het structurele ankerpunt waaraan het gehele systeem is gekoppeld is, dient te voldoen aan de eisen van de EN 795 en dient een minimale kracht van 15 kN te kunnen weerstaan.

##### VIDA ÚTIL

La vida útil del producto es ilimitada siempre y cuando no posea defectos, se realice la pertinente revisión periódica, por lo menos cada 12 meses a partir de la fecha del primer uso del mismo, y esté control纱尔 en la ficha de vida útil del producto. Los siguientes factores pueden reducir la vida útil del producto: uso intensivo, daño en los componentes del producto, contacto con substancias químicas, temperatura elevada, abrasiones, cortes, choques violentos, errores en el uso y las recomendaciones para el mantenimiento. Si no está seguro de que el producto pueda ofrecer la seguridad necesaria, póngase en contacto con C.A.M.P. spa o con su distribuidor.

##### TRANSPORTE

Proteger el producto contra los riesgos detallados en el apartado anterior.

### NEEDERLANDS

### ALGEMEEN INFORMATIE

De C.A.M.P. Groep levert oplossingen voor personen die op hoogte werken middels lichte en innovatieve producten. Deze producten zijn ontworpen, getest en geproduceerd volgens een gecertificeerd kwaliteitssysteem zodat betrouwbaar en veilige producten worden gegarandeerd. Deze instructies informeren u over correct gebruik van het product gedurende de levensduur. **Lees en bewaar deze instructies daaronder.** Indien u de instructies verloren bent kunt u ze als ons downloaden van de website [www.camp.it](http://www.camp.it). UW distributeur dient de gebruiksaanwijzing te verschaffen in de officiële taal van het land waar het product wordt gebruikt.

### GEbruIK

Dit middel moet alleen gebruikt worden door hiervoor getrainde, competentie personen. Indien u niet ziet is, dient de gebruiker onder directe supervisie te staan van een getraind, competent (=door fabrikant of dienre afgevaardigde aangewezen en getraind) persoon. Deze instructies leren u geen technieken voor het veilig werken op hoogte of andere soortgelijke activiteiten: uiterdien kennen de instructies voor de verschillende mogelijkheden.

### REVISIE

Als aanvulling op de normale inspecties die verplicht zijn, voor, gedurende en na elk gebruik, moet dit product iedere 12 maanden onderzocht worden door een vakvuldige persoon, vanaf de datum van eerste gebruikname van het product: de aantekening van deze datum en van de volgende controles moet op de onderhoudskaart van het product gebeuren: beware de documentatie voor controle en raadpleging gedurende de volledige levensduur van het product. Controleer de leesbaarheid van de markeringen op het product.

### LEVENTID

Dit middel moet alleen gebruikt worden door hiervoor getrainde, competentie personen. Instruksjonerne forklarer at denne typen jobb: Du må ha fått en skikkelig opplæring for du tar del i arbeidet. Klatring, og enhver annen aktivitet som dette produktet kan brukes til, er potensielt farlig. Fel valg eller bruk, eller dårlig vedlikehold av produktet, kan førsåske alvorlig skader. Brukeren må være i stand til å kontrollere at dette produktet ikke har vært i et fall. Dårlig felvær til det at ikke blir påført usynlige skader. Brukeren må være i stand til å kontrollere sin egen sikkerhet og håndtere nedfallssituasjoner. For sikkerheten ved bruk av fallskjermene er det grunnleggende at produktet er i god stand og ikke har vært i et fall.

### 3-AÑOS DE GARANTIA

Denna produkt har en 3-årig garanti fr.o.m. inköpsdatum, mot alla material- eller fabrikationsfel.

Följande täcks inte av garantitiden: normalt slijtage, ändringar eller korrigeringar, felaktig förvaring, fräning, skador som uppkommit på grund av olycka eller försommelse, samt icke förutsedda användningar.

### AANVÄNDARINSTRUKTIONER

##### Swivel

C.A.M.P. Swivel är en anordning som har utformats för att sammanfoga två komponenter och möjliggör en rotation som är nödvändigt för att undvika trassel på repet eller på en annan utrustning.

För att kunna ansluta Swivel till en hängsel är det nödvändigt att använda kopplingsdon som certifierats enligt EN362 för höjdarbete, eller också enligt EN12275 för alpin tillämpningar (fig.1).

Under installationen, Swivel ska hållas tätt sammankopplat för att undvika att den flyttar sig från dess positioneringar. Detta är viktigt för att förebygga att kopplingsdonen kan böja under tryck. Detta kan förekomma att kopplingsdonen kan böja under tryck.

Om Swivel inte hålls tätt sammankopplat kan det förekomma att kopplingsdonen kan böja under tryck. Detta kan förekomma att kopplingsdonen kan böja under tryck.

### OPSLAG

Bewaar het uitgepakte product op een koele, droge, donkere plaats, uit de buurt van hittebronnen,

ochsenmasker och andra kemikalier: nejm det produktet med brukar zonerna som är tillämpliga för den respektive användaren.

### TRANSPORT

Beschem het produkt tegen de hiervoor beschreven risico's.

### ANVÄNDNING

Bewaar het uitgepakte product op een koele, droge, donkere plaats, uit de buurt van hittebronnen,

### INFORMAZIONI GENERALI

Il gruppo C.A.M.P. dà una risposta ai bisogni dei lavoratori in altezza con dei prodotti leggeri e innovativi. Sono progettati, testati e fabbricati all'interno di un sistema qualità certificato, per offrirvi un prodotto affidabile e sicuro. Le presenti istruzioni sono destinate ad informarvi sul corretto utilizzo del prodotto per tutta la sua durata: **leggete, comprendete e conservate queste istruzioni.** In caso di smarrimento, le istruzioni sono scaricabili dal sito [www.camp.it](http://www.camp.it). Il rivenditore deve fornire il manuale istruzione nella lingua del paese utilizzatore del prodotto.

### UTILIZZO

Questo equipaggiamento deve essere usato solo da persone addestrate e competenti oppure sotto la supervisione di persone addestrate e competenti. Con queste istruzioni non apprenderete le tecniche dei lavori in altezza o di qualsiasi altra attività associata; dovete aver ricevuto una formazione adeguata prima di utilizzare questo equipaggiamento. Arrampicare, e ogni altra attività per la quale questo prodotto può essere usato, è potenzialmente pericoloso. Un'incorrecta scelta o utilizzo, oppure un'incorrecta manutenzione del prodotto può causare danni, gravi ferite o morte. L'utilizzatore deve essere in grado di controllare la sua sicurezza e di gestire le situazioni di emergenza. Per i sistemi anticaduta, è essenziale per la sicurezza che il dispositivo o il punto di ancoraggio sia sempre correttamente posizionato e che il lavoro sia effettuato in modo da ridurre al minimo il rischio di cadute e l'altezza di caduta. Verificare lo spazio libero al di sotto dell'utilizzatore sul luogo di lavoro e prima di ogni occasione di utilizzo, in modo che in caso di caduta non ci sia collisione con il suolo, né la presenza di altri ostacoli sulla traiettoria di caduta. Un'imboccatura anticaduta è il solo dispositivo di presa del corpo accettabile che può essere utilizzato in un sistema anticaduta.

Il prodotto deve essere usato solo come di seguito descritto e non deve essere modificato. Deve essere usato in abbinamento ad altri articoli con caratteristiche adatte ed in accordo alle normative europee (EN), considerando i limiti di ogni singolo pezzo dell'equipaggiamento. In queste istruzioni sono rappresentati alcuni esempi di utilizzo improprio, ma esistono molti altri esempi di applicazioni sbagliate che è impossibile elencare o immaginare. Se questo prodotto deve essere considerato come personale.

### MANUTENZIONE

**Pulizia delle parti tessili e plastiche:** lavare esclusivamente con acqua dolce e sapone neutro (temperatura massima di 30°C) e lasciare asciugare in modo naturale, lontano da fonti dirette di calore. **Pulizia delle parti metalliche:** lavare con acqua dolce ed asciugare. **Temperatura:** mantenere questo prodotto al di sotto di 80°C per non pregiudicare le prestazioni la sicurezza del prodotto. **Agenti chimici:** buttare il prodotto in caso di contatto con reagenti chimici, solventi o carburanti, che potrebbero alterare le caratteristiche del prodotto.

### CONSERVAZIONE

Conservare il prodotto disimballato in un luogo fresco, asciutto, lontano dalla luce e da fonti di calore, alta umidità, bordi od oggetti acuminati, sostanze corrosive o ogni altra possibile causa di danno, o deterioramento.

### RESPONSABILITÀ

La società C.A.M.P. spa, o il distributore, non acconteranno alcuna responsabilità per danni, ferite o morte causate da un utilizzo improprio o da un prodotto CAMP Safety modificato. È responsabilità dell'utilizzatore capire e seguire le istruzioni per il corretto e sicuro utilizzo di ogni prodotto fornito da o attraverso C.A.M.P. spa, usarlo solo per le attività per cui è stato realizzato e applicare tutte le procedure di sicurezza. Prima dell'utilizzo dell'attrezzatura, considerare come un eventuale salvataggio in caso di emergenza possa essere eseguito in sicurezza ed in modo efficiente. Siete personalmente responsabili delle vostre azioni e decisioni: se non siete in grado di assumervi i rischi che ne derivano, non utilizzate questa attrezzatura.

### GARANZIA 3 ANNI

Questo prodotto ha una garanzia di 3 anni a partire dalla data di acquisto, contro ogni difetto del materiale o di fabbricazione. Non sono coperti dalla garanzia: l'usura normale, le modifiche o i ritocchi, la cattiva conservazione, la corrosione, i danni dovuti agli incidenti e alle negligenze, gli utilizzi a quali questo prodotto non è destinato.

### INFORMAZIONI SPECIFICHE

#### ISTRUZIONI D'USO

##### Swivel

CAMP. Swivel è un dispositivo concepito per connettere due elementi e permettere una funzione di rotazione necessaria ad evitare attorcigliamenti della corda o di altro equipaggiamento. Per effettuare il collegamento dello Swivel è necessario utilizzare connettori certificati EN 362 per i lavori in altezza oppure EN 12275 per applicazioni di tipo alpinistico (fig.1).

Durante l'utilizzo e indispensabile che Swivel rimanga sempre in tensione, onde evitare posizionamenti potenzialmente pericolosi dei connettori con trazioni sull'asse minore che potrebbero portare alla rottura del connettore stesso. (fig.2)

Nel caso di applicazioni in cui Swivel non possa rimanere in tensione è opportuno che sia collegato maglie rapide certificate EN 362 Classe Q per i lavori in altezza oppure EN 12275 Classe Q per applicazioni di tipo alpinistico.

Swivel non deve essere posizionato in modo non assiale rispetto ai connettori evitando così che possa andare a contatto con spigoli o superfici che possano compromettere la resistenza (fig.3).

Il punto di ancoraggio strutturale a cui si connette il sistema deve essere posto al di sopra dell'utilizzatore, essere conforme alla normativa EN 795 e avere una resistenza minima di 15 kN.

##### Multianchor

C.A.M.P. Multianchor (5, 8 e 12 fori) sono dispositivi concepiti per permettere di creare molteplici punti di attacco da un singolo punto di ancoraggio strutturale.

Per la conessione è necessario utilizzare connettori certificati EN 362 per i lavori in altezza

oppure EN 12275 per applicazioni di tipo alpinistico (fig.4).

Evitare di far lavorare Multianchor contro spigoli vivi che possano compromettere la resistenza (fig.5).

Il punto di ancoraggio strutturale a cui si connette il sistema deve essere posto al di sopra dell'utilizzatore, essere conforme alla normativa EN 795 e avere una resistenza minima di 15 kN.

##### REVISIONE

Oltre al normale controllo visivo effettuato prima, durante e dopo ogni utilizzo, questo prodotto deve essere esaminato da una persona competente con frequenza di 12 mesi, a partire dalla data del primo utilizzo del prodotto; la registrazione di questa data e dei successivi controlli deve essere effettuata sulla scheda di vita del prodotto; conservare la documentazione per il controllo e per riferimento per tutta la vita del prodotto. Controllare la leggibilità delle marcature del prodotto. In caso di uno dei seguenti effetti il prodotto deve essere messo fuori servizio:

- presenza di fessure;
- usura eccessiva degli alleggiamenti del connettore;

• corrosione che altera gravemente lo stato superficiale del metallo (non sparisce dopo un leggero sfregamento con carta vetrata);

- deformazioni permanenti;
- bloccaggio totale della funzione di rotazione (Swivel)

Se l'articolo o uno dei suoi componenti mostrano segni d'usura o difetti, deve essere sostituito, anche solo in caso di dubbio. Ogni elemento che fa parte del sistema di sicurezza può essere danneggiato durante una caduta e deve dunque sempre essere esaminato prima di essere riutilizzato.

Ogni prodotto coinvolto in una grave caduta deve essere sostituito, in quanto può aver subito dei danni strutturali non visibili ad occhio nudo.

Se l'articolo o uno dei suoi componenti mostrano segni d'usura o difetti, deve essere sostituito, anche solo in caso di dubbio. Ogni elemento che fa parte del sistema di sicurezza può essere danneggiato durante una caduta e deve dunque sempre essere esaminato prima di essere riutilizzato.

Ogni prodotto coinvolto in una grave caduta deve essere sostituito, in quanto può aver subito dei danni strutturali non visibili ad occhio nudo.

##### INSTRUZIONI FOR USE

##### Swivel

The C.A.M.P. Swivel is designed to connect two parts of a system and prevent ropes from twisting. Systems incorporating a Swivel require EN 362 certified connectors for work at heights or EN 12275 certified connectors for mountaineering (fig. 1). When being used, the Swivel must remain tensioned in order to prevent incorrect positioning of connectors (stresses on the minor axis can result in breaking of the connector (fig. 2). If the Swivel is used in a system where it cannot be tensioned, locking quick links must be used (EN362 Class Q quick links for work at heights or EN 12275 Class Q quick links for mountaineering). The Swivel must always work along the major axis with certified connectors in a system that prevents the Swivel from hitting sharp edges which can decrease its strength (fig. 3). The structural anchor point to which the system will be connected should be situated above the working level, be in conformance with EN 795 standards and have a minimum static strength of 15 kN.

##### Multianchor

C.A.M.P. Multianchors (5, 8 and 12 holes) are designed to create multiple attachment points from a single anchor point. Connection of a Multianchor to a single anchor point requires EN 362 certified connectors for work at heights and EN 12275 certified connectors for mountaineering (fig. 4). Always prevent the Multianchor from hitting sharp edges which can decrease its strength (fig. 5). The structural anchor point to which the system will be connected should be situated above the working level, be in conformance with EN 795 standards and have a minimum static strength of 15 kN.

##### REVISION

Ce produit est garanti pendant 3 ans à compter de la date d'achat, pour tout défaut de matière ou de fabrication.

In addition to the normal inspection required before, during and after each use, this product must be inspected by a skilled person every 12 months, starting from the date the product is first used; this date and the subsequent checks must be recorded on the product's life sheet: keep this literature for inspection and reference for the life of the device. Check the legibility of the product's markings.

In case of one of the following defects are present, the product should be withdrawn from service immediately:

- presence of cracks;
- general wear and tear;

• deep corrosion that does not disappear after a light rubbing with glass paper;

- permanent deformations;

• total locking of the rotation function (Swivel).

Any product or component showing any defect or wear, or if in doubt, should be withdrawn from service immediately. Each product in the safety system can be damaged during a fall and must be always inspected before use again. Do not continue to use a product after a major fall because a damage may have occurred, even no external signs are visible.

##### LIFETIME

The lifetime of the product is unlimited, unless any defect appears and provided that periodic

inspections are made at least once every 12 months from the date the product is first used and the results are recorded in the life sheet of the product. The following factors can reduce the lifetime of the product: intense use, damage to components of the product, contact with chemical substances, high temperatures, tears and abrasions, violent impacts, failure to maintain as recommended. When suspect that the product is no more safety and reliable, please contact C.A.M.P. spa or the distributor.

##### INFORMAZIONI SPECIFICHE

#### INSTRUZIONI D'UTILISATION

##### Swivel

The C.A.M.P. Group meets the needs of workers at height with light and innovative products. These are designed, tested and manufactured to a certified quality system, ensuring reliable and safe products. These instructions inform you about the correct use throughout the life of the product: **read, understand and keep these instructions.** If lost, you can download the instructions from the web site [www.camp.it](http://www.camp.it). The retailer must provide the instruction manual in the language of the country where the product is to be used.

##### USE

This equipment should be used only by trained and competent persons. Otherwise the user should be under the direct supervision of a trained and competent person. This notice will not teach you the techniques for work at height or any other associated activity: you must have received qualified instruction before using this product. Climbing, and any other activity for which these products may be used, is inherently dangerous. The consequences of incorrect selection, misuse or poor maintenance of equipment could result in damage, serious injury or death. The user must be medically capable to control his own security and any possible emergency situations. For equipment intended for use in fall arrest systems, it is essential for safety that the anchor device or anchor point should always be positioned, and the work carried out in such way as to minimise both the potential for falls and the potential fall distance. Verify the free space required beneath the user at the workplace before each occasion of use, so that, in the case of a fall, there will be no collision with the ground or the other obstacle in the fall path. A full body harness is the only acceptable body holding device that can be used in a fall arrest system. The product should only be used as instructed and no alterations should be made to it. It may be used in conjunction with any appropriate items of suitable configuration and according to the EN standards, with due consideration to the limitations of each individual piece of equipment. This leaflet shows examples of improper utilizations of this product. Note that it is impossible to show all the possible ways in which this product can be used, as it is inherently dangerous. The consequences of incorrect selection, misuse or poor maintenance of equipment could result in damage, serious injury or death. It may be used in conjunction with any appropriate items of suitable configuration and according to the EN standards, with due consideration to the limitations of each individual piece of equipment. This leaflet shows examples of improper utilizations of this product. Note that it is impossible to show all the possible ways in which this product can be used, as it is inherently dangerous. The consequences of incorrect selection, misuse or poor maintenance of equipment could result in damage, serious injury or death. The user must be medically capable to control his own security and any possible emergency situations. For equipment intended for use in fall arrest systems, it is essential for safety that the anchor device or anchor point should always be positioned, and the work carried out in such way as to minimise both the potential for falls and the potential fall distance. Verify the free space required beneath the user at the workplace before each occasion of use, so that, in the case of a fall, there will be no collision with the ground or the other obstacle in the fall path. A full body harness is the only acceptable body holding device that can be used in a fall arrest system. The product should only be used as instructed and no alterations should be made to it.
